

Square Fire Box Portable Engine—10 and 12 Horse Power.

Gaar's Improved Treshing Engine.

Courtesy of S. C. Sunday, R.D. 1, Modoc, Indiana
We are showing this engine because of safety valve. Rather unique. To adjust you just turned the wing nut at end of the arm. 1870 A. Gaar Co.

Mr. L. K. Wood of Mendon, Utah, an authority on steam traction engines and an ardent model maker shown with his 1/4 inch scale model of a Case traction engine.

A one-half inch scale model of an 1892 Russell engine built by L. K. Wood, and operated here by Ted Middleton of Aberdeen, Washington himself a thorough-going steam traction fan. Mr. Wood owns the 1892 Russell from which the model was copied.
